June 27, Alfred Payette from 3rd hand to back tender.

SPECKLES MT., 3450 FT. HIGH, FROM MEADOW AT SILVER STREAM

WALTER REID WINNING POLE VAULT AT Y. M. C. A. MEET MEMORIAL DAY

Lest We Forget

In the issue of the Brown Bulletin for June, 1921, we published a photograph of the Honor Roll of the Brown Company men who served in the Great War. In the same issue, a notice was printed offering the services of the Department of Labor in obtaining the army Victory Medal. Through the kindness of Mr. H. S. Lee, who took a transcript of the service record from the discharges submitted, we are able to print the following details of the service of many of the men who went out from Berlin. Such a record is of course imperfect, because it is limited to information contained on the discharges that came through Mr. Lee's hands.

EMPLOYEES WHO HAVE APPLIED FOR VICTORY MEDALS

THE LADIES OF THE CAST AND CHORUS
BURGESS MINSTRELS

"Atta Boy!" How often we've heard that peppy expression, yet never has it been more expressive of pep, nonsense and novelty than when used as the title of the Burgess Show given May 31st, at the Albert Theatre.

The show "Atta Boy" is entirely a "home brew" product, the book and lyrics being written by H. Tindell Raeburn and the music by M. C. Schur. These two boys certainly can turn out some good numbers as the reception of their songs indicated, especially "As Long as This Old World of Ours Goes Round," "Dolls," "As the Rain Came Down," "Girl of My Dreams," and "When Love Comes Rapping at Your Heart." These songs are a great deal better than most of the modern songs.

For weeks it was anticipated and it was with much regret that all demands for tickets could not be met. H. Tindell Raeburn, as director, deserves much credit for the show given this year, and, as in every previous year, he made a most favorable and lasting impression on the Berlin theatre-goers.

It is no mean job to stage a show with non-professionals and it takes untiring energy, patience and co-operation to bring out any chance talent that may be present in a crowd of untrained singers and actors. But each year he has been able to present one or two new stars and this year we can add the names of Amelia Lavoie, Elsie Porter and Arthur Thomas to the galaxy of stars who have been developed through the medium of the Burgess Shows.

Neither is it an easy job to make, paint and design scenery which is acceptable and pleasing to the public and in this Stark Wilson has proven his skill. So to these two, the success of the show is in a good part due and much credit and appreciation is due both of them.

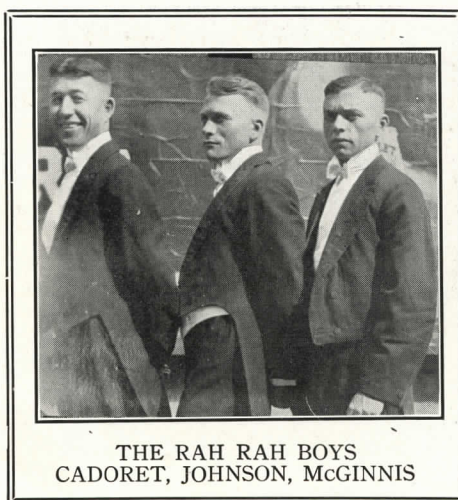

When the show opened on the scene in the blue room of the Hotel Bellaire, O'Neil Plummer and Cecilia Smyth as Tommy and Molly received much applause on their song "Baby Dreams," O'Neil proving as popular as ever.

"Atta Boy"

The Ninth Annual Burgess Minstrel Show

FRANCES FIENDEL, GRACE MACARTHUR, CECILIA SMYTH
THE BRIDAL PARTY

THE RAH RAH BOYS
CADORET, JOHNSON, MCGINNIS

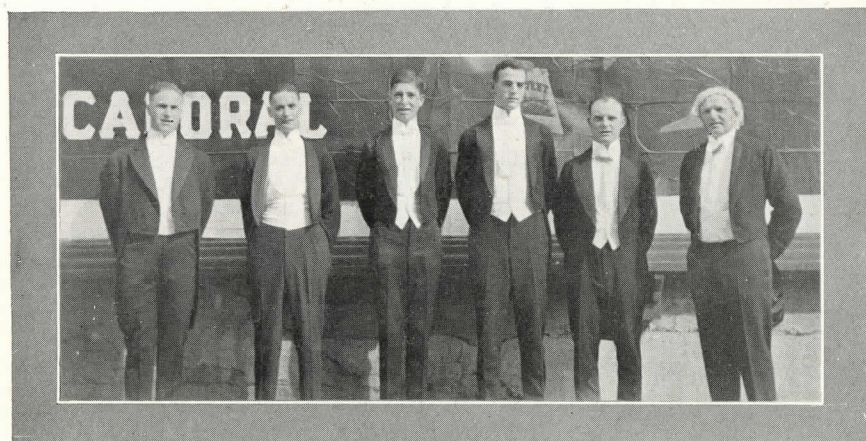

The men in the chorus aided by the chorus girls in their bright costumes seemed better than ever this year and did themselves proud in every song and chorus and to them goes the credit of making the show as nifty and lively as the name "Atta Boy" suggests.

The end men entertained the spectators with usual and unusual songs, dances and comedy stunts. Thomas being encored several times. Noel and Cabana's songs were well received. Cavagnaro and Moreau's eccentric plantation shoe dance was a big number, and Moody's "She's Mine, All Mine" was put over in Moody fashion. As soloists Edmund Chaloux and Amie Lavoie rank with the best, while Grace MacArthur and Jeff McGivney presented something new and catchy in their "Cozy Kitchenette" song as did Amelia Lavoie in the song "And the Rain Came Down." To tell the truth we don't think we'd mind if it poured if we had an umbrella hardly big enough for two. As for our old friend, Dennis Campbell, he made just the sort of a kind, indulgent father whom Sally should have had and when he sang that appealing song "When Love Comes Rapping at Your Heart," all were sure that

Cupid was just around the corner. John Laffin and Frances Fiendel in "Listen to Me," made everybody willing to listen to them any and all of the time, and we also want to say that Johnson, Cadoret and McGinnis are there when it comes to being Rah Rah Boys. As for those in the cast they were especially well chosen this year as each was well suited to the part. Big Jimmy McGivney as Ted Waldron succeeded in winning the heart of small Letty Dodd (Amelia Lavoie) and the long and the short of it was she agreed to look up to him always. John Powers as the Count de Palon made himself of no little account and when he met the sporty old lady known as Aunt Carry (Bernice Eriksen) after an absence of twenty years you may well believe he made every minute count, while in his

song "Dolls" he didn't fail to take account of every chorus girl. As for John Briggs we all know what he can do as an interlocutor but he certainly, as Bobby Kellogg, made a decided hit and succeeded in being very much henpecked by Mary Kellogg (Elsie Porter), a supercilious, snobby and bored second wife. Amelia Lavoie as Letty Dodd, Bobby's divorced wife, kept Mrs. Kellogg, the second, in

complete ignorance of her identity until the last act when she is discovered advising Bobby to be a real "he man." Bobby then shows to a laughing audience that even a worm can turn and speaks his mind and it is a surprised and submissive wife who tearfully agrees to attend the wedding of Sally and Billy which she and Ted Waldron have opposed from the first. This ceremony takes

place in the Kellogg home in Washington and when the curtain rises the bridal party is entering. Sally and Billy are an ideal couple and their singing in "Wedding Bells" will long be remembered. The finale of this act presented a beautiful tableaux showing the bride and groom in a large illuminated heart suspended above while just below were the wedding guests, attendants and bridesmaids, in all their wedding finery and as the curtain falls the generous applause makes every individual taking part and every spectator exclaim "Atta Boy." Give us another next year as good if not better.

THREE OF THE FUN MAKERS

OUR VERSATILE PRESIDENT

President Harding has taken the bull by the horns with admirable skill, and simultaneously he may be able to forge this rainbow of peace into a real shearing knife, and then use the knife to cut down the naval appropriations and the taxes. —Exchange.

Synopsis of Musical Numbers

ACT I.

- 1 "Baby Dreams" Tommy and Molly
- 2 "College Days" Boys
- 3 "As Long As the World Rolls On (Raeburn, Schur).....
..... Cal, Ted, Bobby, Mary, Lowell and Count
- 4 "When Love Comes Rapping at Your Heart" (Raeburn, Schur)
..... Cal and Sally
- 5 "Girl of My Dreams" (Raeburn, Schur) Billy
- 6 "Sweet Lady" Billy and Sally
- 7 "Learn to Smile" .. Sally and Ensemble

ACT II.

- 1 "I wonder How I Ever Passed You By"
..... Tommy, Molly and Guests
- 2 "Baby Dolls" (Raeburn, Schur) Count, Girls and Boys
- 3 "Listen to Me" Harley, Shirley and Guests
- 4 "Yoo Hoo" Minstrels
- 5 "Old Fashioned Girl" Minstrels and Guests
- 6 "On the Gin, Gin, Ginney Shore" A Stanley Cabana
- 7 "Dreamy Hollow" Edmond Chaloux
- 8 "I've Got My Habits On" Arthur Thomas
- 9 "Bring Back My Blushing Rose" Amelia Lavoie
- 10 "She's Mine, All Mine" James Moody
- 11 "April Showers" Letty and Ensemble
- 12 "She's a Mean Job" Harold B. Moreau
- 13 "O-Hi-O" Leon A. Noel
- 14 "Sing Song Girl" Letty and Ensemble
- 15 "They Call It Dancing" John Cavagnaro
- 16 "Ka-lu-a" Billy and Ensemble

ACT III.

Statistics as an Aid to Management

An inquiry into the manufacturing processes of converting raw material and labor into a salable product will disclose a series of transactions the causes of which produce effects that are highly complex. The process of putting these transactions together and observing them as groups results in a classification of production factors known as cost of raw material and cost to manufacture.

To convey information to executives regarding the behavior of these factors in the past, to report on their actions in the present and most important of all to predict their probable course in the future are some of the problems with which the statistician is concerned. This work requires that the causes which have been grouped in a certain manner be dissected and separated into their component units and rearranged into composites according to the requirements of the executives. Investigations of this kind cost patience and laborious effort as well as money and they should not be undertaken unless the practical value and money value of them have been considered and the work guided thereby.

The five cardinal points that must receive consideration in the collection of data are as follows: (1) What statistics

to get, (2) The method of securing the statistics, (3) To whom statistics are to be presented, (4) The form in which statistics should be assembled, (5) Getting action. Of these factors, getting action, contains the proof of the pudding. Long meandering reports loaded down with involved figures seldom serve a highly useful purpose. They have about the same result in actual practice as a ride on a merry-go-round. The music plays and the figures go by so fast as almost to stagger the imagination but when the ride is over the vehicle is just where it started.

To determine what data are necessary for the use of executives and to anticipate as much as possible their requests for information, the six M's of business furnish a sound guide. They are: Money, materials, men, machinery, management and methods.

In selecting any one of these production factors the arrangement of the data must be planned beforehand in order that all time and energy will be expended for a definite purpose. After data has been collected the most important part of the work remains to be done, that of conveying information to the executives. To do this efficiently it must be remembered for whom the information is prepared and what use will be made of it.

Of the production factors mentioned, men and materials furnish the basis of the bulk of statistical information. As an example we may select the requirements of men who are engaged in the cutting of raw material in the form of trees for the manufacture of paper. The conditions under which the worker operates require that he be fed, housed and supplied with equipment by his employers. It is evident that in order to make such a worker and his work efficient, his requirements must be anticipated before operations commence. Food tonnage and the kind of food consumed furnish important statistical data. Statistics show that in the course of a certain period of his employ a man will consume fifty different kinds of provisions. Investigations, covering a period of years, disclose the fact that the tastes and capacities of stomachs, be they owned by Americans, Poles, or Russians, are on an average remarkably uniform. In examining the consumption of food products totaling millions of pounds it has been established that a definite relation exists between the pounds consumed per meal and the worker. It can therefore be ascertained with a degree of accuracy what the food tonnage will amount to for a certain production of pulpwood. Where large quantities of food are consumed

during an operating season, knowledge of this kind is of importance to those responsible for the purchase of supplies.

Statistics deal with great numbers, the numbers of the items which compose some part of the economic body as a whole. It is with the complex, not with the unit that it is concerned. If we regarded only a single production center in our inquiry in the food consumption referred to above, we would not find any constancy. For we would then have to deal with the vagaries of men's appetites, the competency of cooks, scarcity of certain articles, summer and winter seasons and other factors. Under such conditions we could not trace with certainty the effects of any law. But add unit to unit, production centre to production centre, district to district and the individual peculiarities of the parts are rapidly lost in the total. The assumption that underlies all statistical investigations is that many independent disturbing causes of small individual effect, neutralize one another in the mass.

Promptness, brevity, conciseness and logical order are elements which must be given proper consideration in the preparation of statistical data. These elements are greatly aided by graphic charts which eliminate most of the mental sorting and resorting of the large number of factors which so many business problems possess. Graphic charts present data in such form that the proportionate relationship is vividly portrayed and data is weighed with much smaller mental effort, thus permitting greater concentration on the task of making decisions.

—?—

PORTLAND OFFICE

TEAMSTERS AND SURVEYORS

According to the 1922 issue of Portland directory, Mr. Charles F. Safford of the accounting department, has moved to Bath, Maine. Charley must have bid in some of the U. S. Shipping Department's houses recently.

Conan Doyle should realize that there is trouble enough in this world without undue speculations about the future.

Philip Hamilton of the credit department, now announces he is no weather forecaster. It cost him two bits to find it out, and he is not sure yet who got the two bits.

John Vanier was seen on Congress

street with a new license on the front of his car recently, presented to him by the members of the South Portland Fire Department.

One of these days we shall have a President who was born in a hospital instead of a cabin.

If the number of farm and garden tools going over to Tom Churchill is any criterion, Tom must have bought every farm on the Cape.

The United States Senate is a hollow space entirely surrounded by cloak rooms full of Senators.

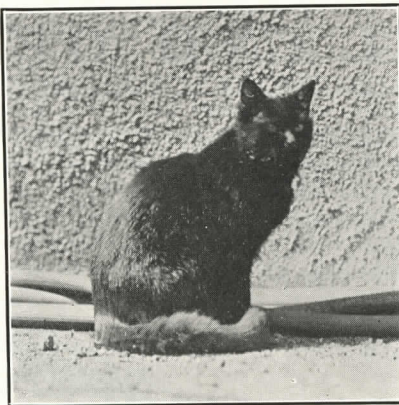

Mr. Harold Eaton of the credit department, has severed his connection with the Company. We understand he is to travel for the Portland Directory. Mr. Eaton has the best wishes of the boys in the office for success.

College professors say success depends upon preparation, but many of our most successful men are sure it depends upon perspiration.

After the baby contest is through, there should be another started for the best husband and father. Portland office can put in an entrant of one who got up cheerfully at two o'clock in the morning in response (or obedience?) to the call

of his better half, to take the Monday washing from the line before it should get wet by an approaching shower. He may not be eligible for a Carnegie medal but he surely deserves honorable mention.

A gentleman called at the office a few days ago and wished to talk with Mr. King of the purchasing department. Mr. King was informed that a gang was outside and wished to talk with him but he said he thought he would not be able to see them. When he was told that "all of the gang" consisted of was one man he was pleased to see him. To make the above clear we will say in passing that the man's name was Oliver Gang.

Here'e Nigger, the cat,
As black as your hat,

Who patrols the Brown Company's wharf,
He's slick an' he's clean,
And he ain't a bit lean,
For he sure gets his grub, on an' orf.

They say there's a bet
That this pertickler pet
Won't look a dock rat in the eye;
Don't know as I blame 'im,
An' don't think 'twould shame 'im
To give them rodents the go-by.

F'r a fact, this black cat
Is some aristocrat,
As Johnnie an' Archie will swear;
You'd think 'im full bred
As he perks up his head,
With 'is durned little tail in the air.

Jing.

Obituaries

CASCADE MILL

Arthur Doyle was born in Canada, Oct. 28, 1869, and commenced to work for the Company, April 9, 1920, where he has worked until his death in Ayer, Mass., May 5, 1922.

SAW MILL

Peter Francoeur was born June 29, 1854, and came to work in the saw mill May, 1895. He has worked continuously for the Company since then, working in the tube mill at the time of his death which occurred June 5, 1922.

SULPHITE MILL

Phil. Viancour was born Nov. 28, 1891, and has worked for the Burgess mill since June 15, 1914. He died June 6, 1922.

FERRIS-BEAUDOIN

Employees of the entire Brown Company but more especially those of the sulphite mill were pleased to hear of the wedding of Juliette C. Beaudoin and Byron E. Ferris on Saturday, June 24th. Though friends had looked forward to this event for some time, the exact date was unknown and the wedding came as a complete surprise.

The residence of Mr. and Mrs. P. T. Beaudoin was the scene of the wedding and the house was prettily decorated with flowers for the occasion. The bride was attractively dressed in white and carried a bouquet of white roses. Miss Eva Young acted as bridesmaid and the groom was attended by Dewey Powers. At 2.30 Rev. Edward W. Moore of the Congregational church of this city performed the double ring service in the presence of the bride's family. The bride cut the wedding cake, refreshments were served and the happy couple left in time to take the four o'clock train.

The former Miss Beaudoin is a well known Berlin girl and for the past six years has been one of the Burgess girls, while the groom has been employed at the sulphite mill as a piper for over two years.

HOSE

ONE of the most useful and one of the most abused pieces of apparatus that is in use about the mills. We do not refer to men's hose or ladies' hose. Both of these varieties have their use. Men prefer to hide them and use them simply as a necessity. The ladies take the opposite stand preferring to expose them almost all they can and the more gauzy they are in texture the more desirable they appear to be considered.

Mill hose is bought for use to carry water, steam or air. The manufacturers endeavor to sell us and we buy hose of proper quality for the service it is to render. There are numerous varieties of hose differing in thickness of rubber cover and lining, number of plies of canvas, quality and vulcanization of rubber, etc. A water hose is not made to use as a steam hose. It may be strong enough to stand the pressure but not the heat. Air hose is in another class; steam hose is specially prepared to stand the action of high heat as well as pressure. Our mills buy a large amount of hose yearly, much more than should be necessary, due to the abuse in service.

When using hose in steam service it is important to have tight valves on the line. A hose attached to a steam pipe and left idle will go to pieces quickly if steam is escaping through the hose. It is not only bad for the hose but a direct waste of steam.

A light ply water hose will soon split if used for high pressure service. All hose should be drained when not in use. Probably air hose is subjected to the most abuse of any.

Don't kink your hose. One kink in a hose line will cause more injury than a month's service. If you need to shut off a hose line use the valve provided for that purpose. It may not be as convenient as doubling up the hose in your hands, but it is more economical and foremen are especially ordered to see that this request is carried out.

HE WANTED A PET

"My good man, you had better take the trolley car home."

"Sh' no ushe! My wife wouldn't let me—hic—keep it in the house."

CASCADE JUICE

Some of the old-timers tried to stage a come-back against D. L.'s team, so they say—improvised canes and back plasters were in great demand. The superb coaching of Fred Studd was a feature.

We are glad to report that Louis Rix has returned to work nicely equipped with an artificial limb. Mr. Rix has been off duty many months, the final outcome being an amputation of his leg.

Wm. Barrett has returned to Portland for further treatment to his wrist.

It's no more "Spike," it's Capt. Hennessy of the Air-Craft Division, if you please.

Repairs on the sulphite screens are being made.

Walter Ross is assisting the sample clerks in the machine room.

Short Getchell is doing some special training, but for what no one knows. He is well trained now.

Mr. Maines is quite busy handling different kinds of paper.

About the only men that can't seem to get to work in case the electric car jumps the track, are the laboratory men. What do you say, Hayden?

Ross has found a rent.

The new automatic press in the printing department is about the last word in mechanical equipment. It's a peach!

That poetry about Jack and the beater man in last month's Bulletin was some slam. Eh, Jack?

It looks good to see the wood pile growing, and it would look good to see it disappearing as well.

The new dryer has been improved upon and painted ready for turning out a superior bleach stock.

Fred Sylvester purchased an R. & V. Knight automobile. It's a beaut, Fred.

John Haney has gone and did it. Congratulations.

Harry Freeman has returned to work in the repair department.

Fred McKenney got down to see the wrecked Nash, so did Al and Elmer.

Mr. Allen of the General Electric Company at Pittsfield, Mass., was a business visitor.

Joe and Harold got all the fish out of the Moriah brooks, so if you anticipate a

hike over for fish, cancel it till they stock the streams again.

Golf is a great game, so enthusiasts claim, and a wonderful opportunity to learn will be given any employee desirous of doing so, by a membership in the Androscoggin Valley Country Club. See Mr. Chase in the laboratory if you are interested.

Fred Morrisette has purchased a new Jewett touring car. No, Dnbe is walking yet!!!

We would like to get some more news from Riverside. Page Mr. Hull.

Say, Bill, do you know *Jack King*? He's out to make the Cascade *nine* but I saw the poor fish out with a *queen* the other night and his chances are slim! She was *ace-high* all right but he looked like the *deuce*; he's no *four-flusher* though, for the waiter brought a *tray* full of fancy grub and Jack *ate* till *five* minutes past *seven*! No wonder you *often* see him listed in the Bulletin as among the *sicks*!

Harry T. Laffin, formerly of the Cascade office, now secretary to Gov. Harkness of Vermont, recently visited friends at the mill.

Most men, when they meet a woman with brains, wonder where she stole them.

SULPHITE MILL GAS

We wish to thank the members of the Burgess office for the splendid and useful gift which we received on the occasion of our wedding.

MR. AND MRS. ERNEST GENDRON.

Laing is taking a correspondence course from the post office on "How to drive a Paige."

Congratulations, Ernest. You can save car fare to Whitefield now.

Harry Wheeler, while out riding on his motorcycle recently, had it proven to him that he could not read sign boards and admire the milk maids and still keep on the road. Harry was going through Milan at a good rate of speed when a good look-

ing young lady with bobbed hair and short skirts came out of a farm house. One look and Harry lost all control of his machine, and when Harry woke up he found himself in a field and his trusty steed beside him. "I never expected to see a flapper up there," said Harry. "She must live in Berlin and strayed away from the rest of the flock."

Frank Petty went down to the station to get a suit case and on his way back he met an officer who did not like the looks of the suitcase so he followed Frank home. What he found we do not know but Frank has a lot of friends.

One touch of kindness makes the whole

world wonder if you will stand for another touch.

RIVERSIDE MILL

We wonder why the night crews can not have ice for the drinking fountain as well as the day crews. Cold drinking water is as acceptable at night as in the day.

It was quite unnecessary to ask a certain golfer what sort of round he had played, for as he approached the club house after leaving the 18th, several idle caddies made a rush for him, saying:

"Clean your clubs, sir?"

"No!" he replied with tremendous venom. "Let the d—d things rust."

CHEMICAL MILL EXPLOSIONS

Another new face in the Caustic Plant. Henry Conway made a clean shave.

Jim Barnes is back after a long cruise.

Our esteemed young friend, Cliff. Mooney, is now in the poultry business. Yes, some judge of chickens, eh what.

Another Vallisism: "I put 13 eggs under one of my hens and she hatched out 17 chicks."

Don't fret too much over that trout supper you nearly had, Parker.

Richard Christianson is sporting a new Reo car. Now maybe he will ride.

How's the fur trade, Jack? Remember the score, 5 to 4.

Most people take rod and line when they go fishing. Not so with Fred Clark. He takes an axe.

Our chemical friend, Alf. Watt, is showing considerable speed of late. Dancing several times weekly.

Fred Clarke and John Labris did a fish-

ing go, or were supposed to have gone. By their results folks would suppose that they went picking raspberries.

Herbert Cordwell, from the sulphite mill, gauge department, helped Edgar Gagnon while "Red" Thomas was away.

Harold Knapp spent a few days at Rumford on liquid chlorine matters.

Henry Lambert has joined the liquid chlorine crew after considerable experience railroading with the Berlin Mills Railroad.

Austin Buckley and Joe Vallis are thinking of starting a drug store.

Ed. Gagnon spent his two weeks' vacation and came back in very good shape. He saw Cascade and Gorham on his trip.

H. Parker is seeking a couple of "swampers." He needs them to cut a way out of his place, as the recent rain-storm blew a few trees down.

The Chemical Mill sends greetings to Reddy Thomas, who has just taken the matrimonial plunge. He will be up for

air in two or three weeks.

Arvid, the flying parson, returned from a trip to Burgess Office with a smile the other day. The reason was that he received his dividends of "Let's Go" vacation club.

Our latest wave. Knapp listening to the stock reports on the wireless telephone.

Parker, Gale and Clark visited Whitefield recently. They returned O. K., but Gale felt a little under the weather.

Carl Johnson has plenty of times these evenings.

Charles B. Barton just returned from a successful trip to Newton Falls, N. Y., to see his son. On the way he encountered some Vermont mud, which he says is quite slippery.

C. O. Mooney is quite a musical student these days. He is studying by wireless.

How do!

Hank O'Connell, alias "Tex," is still holding his own on the East Side.

UPPER PLANTS NOTES

MAIN OFFICE

Morris McCarthy leaves in June for his annual invasion of Kezar Lake. Every year Mr. McCarthy gets his share of speckled beauties from this, his favorite spot.

Mr. Tankard was in Lisbon during the past month on business.

Guess everyone in the upper plant has an auto by the amount of parking space occupied daily in front of the store.

Miss Monahan has returned to her home for an extended vacation.

All the boys in the office have had at least one fishing trip each and the result is that the usual number of fishing stories are in circulation.

William Oleson made a flying trip to

Portland during the month. He said he was after clothes, but others think he was after anything but clothes.

Mr. Bryant hasn't gone to Success pond yet.

Cards were received announcing the marriage of Miss Nutting, daughter of Elmer E. Nutting formerly of the accounting department. Many friends unite in extending their best wishes.

What's the matter with the office baseball team?

Yes! Morris says that fish weighed 3 lbs., sure. He estimates it cost just \$8.00 per pound.

Mr. Bailey was seen limping around a day or two last month. Wonder what the matter was. Darn those sidewalks

on High street anyway.

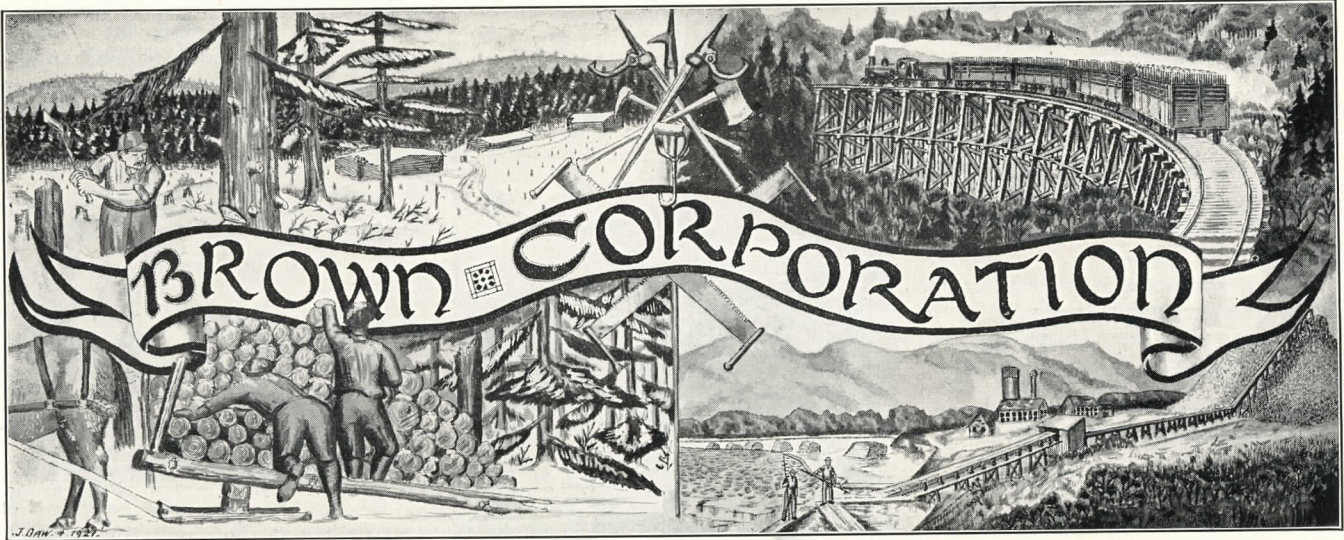

Everybody is straining to meet Mr. Brown's request for earlier cost reports. Everybody is putting in every effort to put it across.

Hugh Warfield was seen out recently in his Thomas Flier battleship. Hugh says that he saved enough during the winter to fill half the gasoline tank. We'll say he did well at saving and has us beaten for it, a 50 gal. tank.

Everyone attended the Get-Together at the Park casino on the 20th.

Many in the office are ill from spring fever.

Greatness is thrust upon some people, but the trouble is that, when so obtained, it seldom stays.

LA LOUTRE DAM

May 15, 1922.

Brother Bennett:—

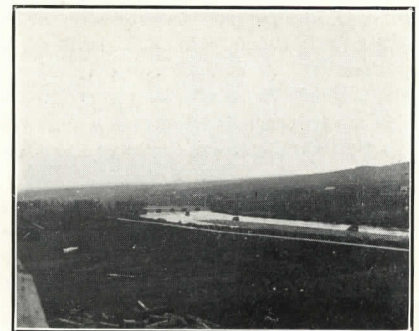

I promised to send some pictures and tell you more about our trip. We got up at 3 a. m., and it rained so hard we decided not to start. Henry Skene, Chas. Barette, Paul Bernier and myself in the party. It was some weather the next day but we started. There was no road, so the dogs had to go in the deep snow. We all had heavy loads, so had to ride most of the way to keep the sleigh loads right side up. We tipped over many times and were very wet, but made the Martin Camp at two o'clock. We built a fire, made some tea and had some sausages. Gave the dogs an hour to rest and then made the dam at 5 p. m. We were all very tired as we had travelled thirty miles that day.

If it wasn't for my reputation I could tell a fish story. We went down the thirty miles and were on top of our house boat when I saw a black object down by the side in about two feet of water. I said to Roby, "Look at that pike." I grabbed a gaff pole about 15 feet long and drove it into his back and held him for a minute; then he got away gaff pole and all, and there was a stream of blood as large as your finger from the gaff wound. Roby said, "You have got him," but away he went. I don't feel like telling his size, but Roby said he was as long as this (and straightened out both arms). Am very sorry I lost him as he would have cut up into a lot of steak.

Will see you soon.

Very respectfully yours,
CAPT. A. E. ROWELL.

P. S. Am sending you a few labels I induced a fellow to give me.

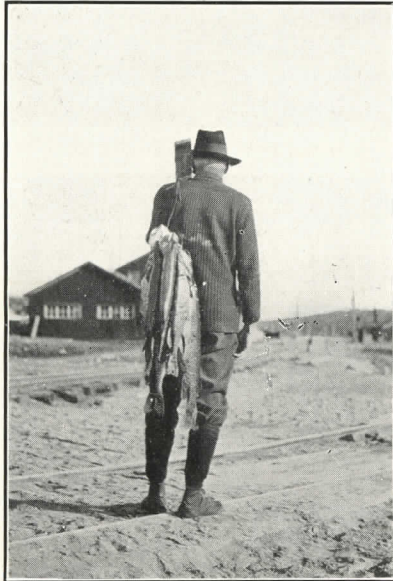

ST. GEORGE, BEAUCE

We have about 17,000 cords piled out at St. Mary this year and about 15,000 cords more in the booms.

We discontinued driving on May 17th on account of low water and have not had sufficient rains to do anything since.

Have sluiced wood held in Howard and Silsby dams on Famine river by using the water stored in Lake Veilleux and Lake Abenaquis dams.

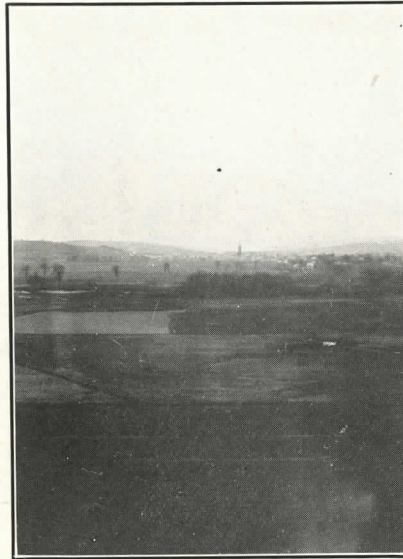

DO YOU KNOW HIM?

Always has a big fish and game story to tell, but says the camera never lies. Four Pike, 30 pounds.

LA TUQUE

Henry Murch and Johnny Cleland both relate that on one occasion when they were fishing from a canoe in Lake Lang, Henry hooked a trout and was about to land it when it struggled off the hook. Thereupon Hen gave it a swipe with his fist, knocking it out for the count, and it lay floating on its back in the water. Johnny immediately made a cast at the apparently dead fish, and hooking it, finally landed it successfully, when it came to life again and attempted to jump out of the canoe, but was finally overcome by the combined exertions of John and Henry.

Both the doughy fishermen swear that the above story is an actual fact, and we have no reason to doubt their word than the famous Baron Munchausen's or the scriptural personage whose name commences with Anna.

ST. MARY

Taken by N. Brown at a height of 105 feet, and one mile from the town.

Still, the general opinion is that this is about the toughest fish story yet related.

An article appeared in the Brown Bulletin of September, 1919, headed "Efficiency," and signed by "Yours for a Square Deal."

Briefly it dealt with the need for employees in general to study their employers' interest and to give the best that is in them in all-round service.

A very creditable article in the main, but many employers very often seem to take too much for granted in the man that sticks to his guns, and overlooks the fact that an occasional "pat on the back" and a little practical appreciation to industrious and intelligent employees, go a long way to get and keep the efficiency spoken off in the article.

Here's the other side of the picture in a paragraph culled from May 20, 1922, issue of "Leslie's."

"Humanity is weak. It usually takes the course of least resistance. Take the average man or woman and place them in a position where the retention of their job does not depend upon the excellency of their work. Place them where they are not expected to put forth their best efforts and where their fellow employees are slighting their tasks. Place them where there is no hope of advancement through superior attainments or industry, and you will find that they will develop exactly the same propensity for shirking their work."

The article from which the above is an extract has reference particularly to the

rank and file of government employees, and is prejudiced and evidently inspired by the opposition, nevertheless one can find some grains of truth there, which the employer of labor could very well take to heart.

We are sorry for the delay in the installing of the new tennis courts at the Community Club, but Mr. J. A. Jones, who was instrumental in the purchasing, assures us that the expert who is expected from England to do the work will be here shortly and that his work and the new courts will be so satisfactory that everybody will soon forget this tedious delay.

LA TUQUE RIFLE ASSOCIATION

An event of more than usual interest took place on our local rifle range on Saturday, the tenth of June, in the first shoot for the Canadian Rifle League Trophy and prizes. This match, which is fired on each competitor's own range, is Dominion wide, as rifle clubs from all over Canada enter every year. The scores of the ten best scorers of the day are taken, and a report sent to Ottawa of the result. Four matches are fired, of which the above was the first.

Most of the local shots are very new at the game, and no very remarkable score was expected under the best of conditions, but when we bumped into very bad conditions and gave a very creditable display it is no wonder we feel "bucked."

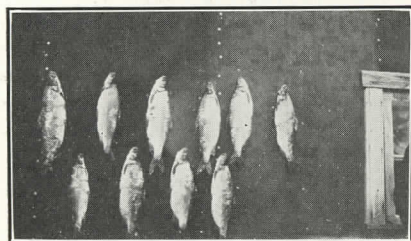

The scores were as under:

A. O. Anderson.....	91
A. C. Carter.....	88
S. M. Nesbitt.....	81
W. D. M. Bone.....	77
G. Oleson.....	71
B. Shallow.....	71
R. E. Hartley.....	65
J. Jamieson.....	61
M. J. Dumit.....	60
W. Richards.....	60

Saturday, May 27th, was an ideal day for the fishermen around La Tuque, and quite a few parties hid themselves to the various lakes and streams, and reported that they had all had a good time, and told the same old fairy tales of the size and quantity of the fish caught, and related tales of sundry adventures incidental to fishing trips in the bush.

Amongst those present, as Reggie used to say when he was local reporter for the St. Maurice Valley Chronicle, was our mutual friend, little Willie, not of East Lynne, but our little Willie of the main office, who had a most painful tale of misadventure to relate. It appears that he was fishing, or rather had his line in the water, when he received orders from

headquarters to prepare the midday meal, the rations having been placed on the ground behind an old French fellow, who was engrossed in his task of hauling them in. Just as Willie was about to put his hands on the pork and beans, etc., the aforesaid fisherman brought back his pole (the discarded shaft of one of Fred Gilman's pike poles) and the hook at the end of the line came into contact with the lower rear of Willie's nether garment. The Frenchman, feeling the pull on his line, gave one terrific jerk forward, with the result that the hook, the size of a small meat hook, became embedded in Willie's rear arear, and in a moment he was suspended over the water on the end of the line, the author of this mishap wondering what kind of a fish he had caught. Poor Willie's wails filled the air, and then only did the wielder of the rod realize that it was not the kind of edible fish he had come to get, so lowering him to the ground and with the assistance of his trusty jack knife, soon cut the hook out of the tender portion of Willie's anatomy. He is sitting on the edge of his chair today, but expects to be alright in a day or two.

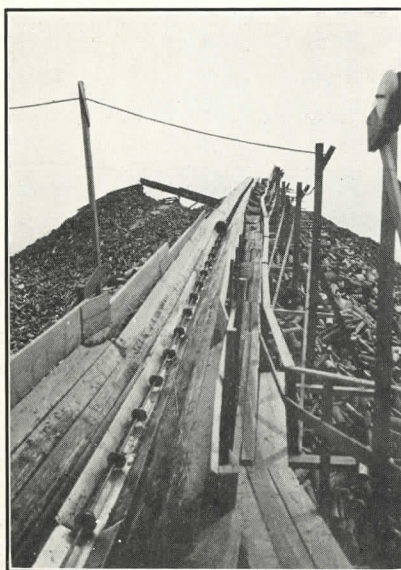

10 WHITE FISH, 40 LBS., LA LOUTRE

Mr. W. B. Brockway of Portland office paid us a visit on his return from La Loutre and Clear Lake Camp, where he and a party of his friends had spent the past two weeks on a much needed rest. He reported the weather ideal throughout the trip and the fishing excellent.

We all hope the trip and rest has done much to restore him to health and that he will come again to our Northland with his friends.

The Ladies Guild of the St. Andrew's church gave a very successful card party and dance at the Community Club on Friday evening, June 2nd, which was held under the auspices of Mrs. Brown, Mrs. Bjornlund, and Mrs. J. Shires.

Mr. Jas. A. Taylor of Quebec office called on us last week and seemed to be in his usual good humor.

ST. MARY

We are sorry not to have any pictures of the big strings of trout, or the big fish brought in by our local fishermen, but this year although the writer has made several requests the pictures are not forthcoming. We hear stories of 80 to 125 lake trout running from a pound to a pound and a half. If you have any photos to offer, boys, would be glad to receive them.

Membership to the Community Club is slowly climbing up to the 500 mark, but still have quite a way to go.

We are wondering if all our members have really tried to find a new member. Have you done your part? If not, why not? This Club was built and is operated for you; to make La Tuque a better place to live; to give you and your guests opportunities and comforts and it is your duty to boost the Community Club and bring in your man. It will mean a little effort but the Community Club is worth the effort. The Community Club will make a better man of you and of your friend that you convince to join.

Don't put it off, bring in your new member today.

Jeff Hayes has been doing his best to raise a moustache during the last six months, and at present has succeeded in getting about $6\frac{1}{2}$ hairs on the left and 4 on the right. He's very disappointed at the slow progress made, especially after trying all ways and means of inducing the "hirsute adornment" to look "sumthin like."

Cheer up, Jeff, old bean, we noticed a charge for fertilizer go through the store-

house recently, and would recommend you to ask Buster to give you a small supply to help the crop come through.

We suggest that the orchestra at the Out For Fun Club dances have large placards printed to announce the Home-Sweet-Home waltz so some of our friends will not get mixed up,—especially Johnny.

Wails from La Tuque

Of the merry little Cut Worm
Just listen to our plaint,
When we get up in the morning
The air with blue we paint.

For he's lopped off the tomatoes
And the onions he has felled,
And when we dig him up we find
With our garden truck he's swelled.

Harry Murch has lost his carrots,
Johnny's radishes are gone,
H. Van Dyne (our new beginner)
Tells the same story as John.

Kenneth Nesbitt's ground's invaded,
By an army of this louse
Who have eaten everything in sight
And have started on his house.

We kill them off with kerosene
And poison them with lead,
We squash 'em and we crush 'em,
Till we're surrounded with the dead.

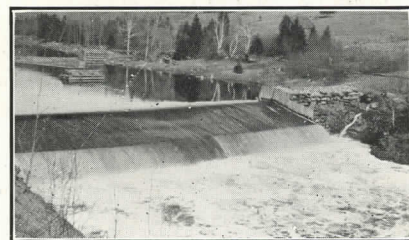

But after trying all ways
To decimate this pest,
We find our efforts useless,
For he still remains our guest.

By a Near Poet.

The Frenchman loves his native wine,
The German loves his beer,
The Englishman loves half and half
Because it gives good cheer;
The Yankee likes his whiskey straight
Because it gives him dizziness,
The Canadian has no choice at all
And drinks the whole d——n business.

Polite Peddler (to small boy swinging on gate): Little boy, is your mother engaged?

Little Boy: Come in and I will see. I think she is married.—Life.

Brown Company Trucking Department

Standing: Ernest Johnson, Ernest (Barney) Quinn, David Livingston, Oscar Loven, Andrew Johnson, painter, Adolph Loven. Sitting: Wilton McLeod, Ralph Stewart, Joseph Basile, painter, Oscar Christianson.

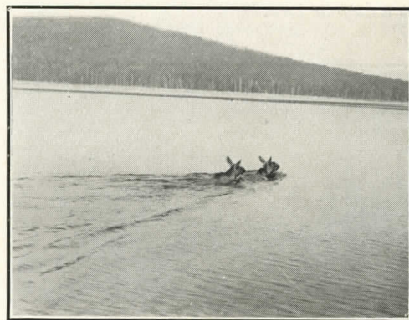

Up until 1918, freight was handled by the mills separately. The Sulphite Mill had two teams running to the freight sheds, Cascade had one, and the Upper Plants had one. This plan became outgrown at that time. A great deal of confusion was inevitable. Freight was often taken by the wrong man and sometimes not signed for at all. In cases of unavoidable error, it was not possible to correct it speedily and time was lost all around.

In 1918 a one-ton International truck was bought, mainly for the use of the store. In 1919, two two-ton Internationals were added and the old separate team service abolished. In April, 1919, the number of employees in the department numbered three.

Since that time, the International trucks have been displaced by White trucks and eight men are employed. The equipment consists of one $\frac{3}{4}$ -ton, three 2-ton and one $3\frac{1}{2}$ -ton trucks, all operating out from the School Street Garage.

Barney Quinn is the efficient director of this service.

THE QUESTION

Is the Hockey Season over?
 Asked a man the other day.
 Is the Hockey Season over?
 Seemed all he had to say,
 In his hand he held a ticket,
 For a touring car (a Ford),
 Just a little piece of paper
 Which he paid a dollar for,
 It read, "We'll have a raffle
 The last game of the season."
 So he just asks the question,
 And it seems he has a reason
 To wonder where his dollar went,
 And ask in tones quite sober,
 As he tries to earn another—
 Is the Hockey Season over?

To step into an open coal hole invariably means that you have a dark and gloomy future before you.
